

Bartosz Osiej - Docs Hub

Central documentation for nine projects: a URL shortener, browser games, a native Rust voxel engine, a cybersecurity toolkit, a browser operating system, an eBPF security monitor, a programming language and a serverless P2P chat.

Every page on this site is written from the actual source code - real endpoints, real modules, real architecture decisions.

Getting started

Open the project catalog to browse every repository and its documentation. Use the search box to find a specific endpoint, module or feature.

The site is built with Docusaurus, deployed to GitHub Pages by GitHub Actions, and exposes llms.txt plus llms-full.txt for AI agents.

Features

- Bilingual docs: English + Polish
- AI-readable llms.txt / llms-full.txt
- PDF book viewer with keyless translation

This sample PDF demonstrates the translator module: open it in the book viewer and press Translate to convert a page into another language.
